Two display equations, one captioned above and one below.

Equation 1

$$(x+a)^n = \sum_{k=0}^{n} \binom{n}{k} x^k a^{n-k}$$

$$(1+x)^n = 1 + \frac{nx}{1!} + \frac{n(n-1)x^2}{2!} + \dots$$

Equation 2

Inline, the roots are $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ and the area of a circle is $A = \pi r^2$.
